

Hackberry

(*Celtis occidentalis*)

Iowa Native

Shade Tree

40' - 60' High

40' - 60' Spread

Oval Shape

**Growth
Fast**

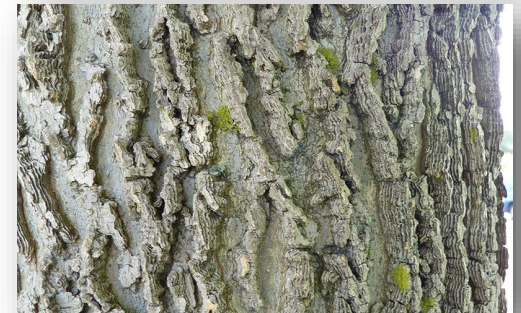

Full Sun

**Water Needs
Moderate**

Zone 2 - 9

This Iowa woodland native grows into a tall tree with a broad crown and arching branches, similar to the American Elm. The Hackberry is tolerant to a wide range of conditions: light shade, occasionally wet soils, drought, clay, and urban conditions. It is a very hardy tree, with a unique corky bark that can easily find a home in its native Iowa conditions.
