

Siouxland Poplar Cottonwood

(*Populus deltoides* 'Siouxland')

Iowa Native

Shade Tree

50' - 80' High

35' - 50' Spread

Fast Growth

Full Sun

Wet/Variety Soils

Oval Shape

The 'Siouxland' is a sterile Eastern Cottonwood, which means it won't produce the notoriously messy, gutter-clogging cotton. While young it stays narrow, but it will eventually widen into a large, high canopy tree. The leaves shimmer in the wind and mimic the sound of rushing water. These are commonly planted along stream banks because of their high tolerance for water, but the 'Siouxland' Cottonwood is good for any wet area. This super fast growing cottonwood will provide shade for any area in a hurry. (Zones 3 - 8)
